

KIRAN PULI

PROFESSIONAL SUMMARY

Engineering Manager and Software Development Manager with 10+ years of engineering experience and 3+ years of engineering team management, leading the design, development, and delivery of scalable, fault-tolerant, multi-tier web services and distributed systems on AWS, Azure, and GCP. Proven track record managing teams of 10–15 software engineers, owning the full software development life cycle (SDLC), driving architecture and design decisions, and partnering with product and program management to deliver high-quality software using Agile best practices. Strong focus on operational excellence, security, scalability, reliability, and live-site operations.

CERTIFICATIONS

- AZ-400: Microsoft Azure DevOps Expert
- AZ-500: Microsoft Azure Security Technologies
- AZ-104: Microsoft Azure Administrator
- AZ-900: Microsoft Azure Fundamentals
- AI-900: Microsoft Azure AI Fundamentals
- AWS Certified Cloud Practitioner
- SAFe Scrum Master (SSM) certified

SKILLS

- Microsoft Azure expertise(Azure)
- Amazon Web Services expertise(AWS)
- Kubernetes
- Azure Kubernetes Service
- Scrum master
- Agile Delivery: Scrum, SAFe fundamentals
- Jira,Confluence,Docker,API Management
- Operations management
- Google Cloud Platform(GCP)

WORK EXPERIENCE ASSISTANT MANAGER- DEVSECOPS/PLATFORM MANAGER 05/2023 to Current

Deloitte, Hyderabad, India

- Manage and mentor an engineering team of 10–15 software engineers, SREs, and release engineers; led hiring of 8+ engineers, drove performance reviews and career development, and improved team retention to 95%.
- Own the long-term technical strategy and roadmap for platform services across Azure and GCP supporting 30+ multi-tier web services and 500+ deployments per week, partnering with architects, product managers, and senior leadership to translate business goals into multi-quarter delivery plans.
- Drive design, architecture, and technology decisions for scalable, fault-tolerant CI/CD and platform services; reduced average deployment lead time from 4 hours to under 25 minutes (>85% reduction) and lifted change-success rate to 98%.
- Own the full software development life cycle including coding standards, code reviews, source control management, build processes, automated testing, certification, and live-site operations; reduced production MTTR by 60% through observability and

runbook automation.

- Lead Agile delivery (sprint planning, backlog management, retrospectives, dependency management) for a team of 10–15, reducing end-to-end delivery timelines by 30% and increasing sprint predictability to 90%+.
- Scope and justify resource, capacity, and budget needs to senior leaders and finance partners; delivered ~\$1.2M annual cloud-cost savings through right-sizing, reserved-capacity planning, and platform consolidation.
- Communicate technical designs, product features, trade-offs, and product strategy to senior leadership, product management, and partner engineering teams.
- Champion operational excellence and security across all systems, including secure SDLC practices, automated security scanning, and incident-response readiness; zero Sev-1 security incidents in last 18 months.

SENIOR/ LEAD DEVOPS ENGINEER 03/2022 to 05/2023

Value Momentum, Hyderabad, India

- Served as technical lead for a delivery team of 8 engineers building and operating Azure DevOps CI/CD workflows for distributed, multi-tier web services; mentored software engineers on design patterns, object-oriented design, code quality, and on-call discipline.
- Designed Docker and Kubernetes-based deployment architectures supporting 20+ microservices and 1,000+ daily transactions per service, improving scalability, fault isolation, release consistency, and reliability.
- Drove reliability engineering and disaster-recovery design, sustaining 99.9% uptime through proactive capacity planning, runbook automation, and incident-response improvements; reduced average incident resolution time by 45%.
- Partnered with product management and engineering stakeholders to align priorities, manage dependencies, and de-risk release timelines; cut release-related rollbacks by 70%.
- Contributed to architecture and design reviews for new and existing systems with a focus on reliability, scalability, and security.

CLOUD OPERATIONS SENIOR ANALYST 02/2021 to 03/2022

Milestone Technologies Inc, Hyderabad, India

- Owned incident response, escalation, and service restoration for high-volume, business-critical distributed enterprise systems in a 24x7 operations model serving 50,000+ end users, building deep expertise in live-site operations at scale.
- Led fault-domain isolation, root-cause analysis, and post-incident reviews for complex distributed-system incidents; corrective actions improved service availability by 1.5% and reduced repeat incidents by 40%.
- Performed L2 and L3 troubleshooting across VMware, Linux (RHEL), Windows Server, networking, DNS, IP address management, VPN, and identity and security controls.
- Operated enterprise observability and incident-management tooling including SolarWinds, Splunk, vCenter, and PagerDuty to detect, triage, and resolve production issues within SLA; sustained 98%+ SLA compliance.

NETWORK OPERATIONS ENGINEER 10/2018 to 02/2021

OpenText Technologies, Hyderabad, India

- Designed and supported Azure DevOps CI/CD pipelines for secure and reliable delivery of cloud-hosted multi-tier web services and applications, supporting 200+ deployments per month.
- Built monitoring, alerting, and incident-coordination workflows for 50+ internal services;

drove operational reviews with engineering and product stakeholders, improving service reliability by 25%.

- Contributed to service design and architecture discussions covering scaling, redundancy, and live-site readiness.

NETWORK OPERATIONS ENGINEER 09/2015 to 09/2018

Tata Teleservices Private limited , Hyderabad, India

- Deployed and operated systems on Azure and AWS cloud infrastructure platforms, building foundational expertise in cloud infrastructure and large-scale operations.
- Developed monitoring solutions that reduced alert noise by 50 percent and improved real-signal detection for production systems.
- Mentored junior engineers on monitoring tools, incident management, and operational best practices.

EDUCATION

Methodist College of Engineering & Technology, Hyderabad

Bachelor of Engineering, Electronics and Communication Engineering, 06/2015
